

Mountains

Vocabulary	Definition	Vocabulary	Definition
Mountain	A part of the land that rises up above everything else.	Volcanic mountain	A mountain formed around the vents of volcanoes. Made from cooled ash and lava.
Mountain range	The collection or group of mountains joined up together.	Fault block mountain	A type of mountain created when cracks in the Earth's surface open up and great chunks of rock are pushed up.
Fold Mountain	A type of mountain created when tectonic plates collide.	Dome mountain	A type of mountain that is smooth and round looking. It is formed when magma gets pushed up but doesn't ever flow out.
Tectonic plate	The giant plates that make up the crust of the earth's surface and move about.	Peak / Summit	The highest point of a mountain or hill.
Collide	When two things crash together, or bump against each other.	Face	The visible side of the mountain.
Base	The bottom of a mountain where it meets flat ground.	Plateau	A flat part of land high up the mountain.
Ridge	Long, narrow top connecting mountains.	Snow line	Above this line, snow covers the mountain all year.
Tree line	After this point, trees cannot grow.	Slope	An incline or decline on the side of a mountain
